

## TI-82/83 *Setting the Viewing Window*

### Example

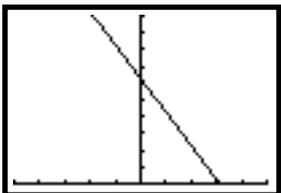

Graph the function  $-8x + 25$  and adjust the viewing window to see more of the function.

**STEP 1:** Press **Y=** and enter the function  $y = -8x + 25$ . Use **(-)** for the negative sign, not **=**. Press **GRAPH**. Note that you cannot see where the function crosses the  $y$ -axis.

**STEP 2:** Examine the current **WINDOW** values by pressing **WINDOW**. Edit the value of **Xmin** by pressing **▼** **(-)** **5** (TI-83: Only press **(-)** **5**). Press **▼** or **ENTER** to move to the next value. Set the remaining **WINDOW** values using the following key sequence: **5** **▼** **1** **▼** **0** **▼** **40** **▼** **4**. Compare your screen with the one on the left.\* The screen on the right shows which aspect of the viewing window each **WINDOW** value controls.

**STEP 3:** Press **GRAPH** to view the screen below.

\***TI-83:** The value **Xres** appears underneath **Yscl**. **Xres** determines the thickness (from 1 to 8) of the lines and axes when they are drawn on the screen. For the best results, leave **Xres** set at 1.

### Exercises

Set the viewing window to each set of values to graph the function  $y = 4x^2 + 11x$ .

- |            |         |            |          |             |          |
|------------|---------|------------|----------|-------------|----------|
| 1. Xmin=-5 | Ymin=-8 | 2. Xmin=-4 | Ymin=-10 | 3. Xmin=-10 | Ymin=-10 |
| Xmax=1     | Ymax=1  | Xmax=1     | Ymax=10  | Xmax=10     | Ymax=300 |
| Xscl=.5    | Yscl=1  | Xscl=1     | Yscl=2   | Xscl=1      | Yscl=25  |
