

Perfect Timing

Halloween would be a perfect time for a real alien to sneak onto Earth—who would notice? See if you can figure out who (or what) the real alien is in this group of trick-or-treaters.

- a. Kelly does not have three antennae.
- b. Both Ethan and Olivia both have scales.
- c. Peter is standing next to the alien with webbed feet.
- d. Olivia does not have two heads.

Taking Treats

The same five “aliens” from the puzzle above were the last trick-or-treaters at the Hudson house. There were 15 treats when they got there, and no treats after they left. How many treats did each alien take? Use the clues to figure it out.

Each trick-or-treater took at least one treat.

Kelly took two treats less than Olivia.

Ethan took four treats.

Peter and Olivia took the same number of treats.

The real alien took one treat more than Peter.

Olivia took one treat less than Ethan.
