

ICK! That's what makes me sneeze?!?

A DUST MITE  
IS A DISTANT  
RELATIVE OF  
THE SPIDER.  
IT IS A TINY  
CRITTER TOO  
SMALL TO  
SEE WITHOUT  
A POWERFUL  
MICROSCOPE.  
DUST MITES  
**LIVE BY**  
EATING THE  
MILLIONS OF  
DEAD SKIN  
CELLS YOU  
SHED ALL  
OVER THE  
HOUSE EACH  
**DAY.**
